

Next Generation Software Development Tools

IndigoRose
SOFTWARE DESIGN CORP.

TrueUpdate® 3.0

Advanced Software Updating System

FLEXIBLE DESIGN

Fully compatible with any update/patching method, from full setups and self-contained binary patches to downloading and extracting from zip files.

EASY TO INTEGRATE

As a compact and standalone executable, the TrueUpdate Client application is extremely easy to integrate into software. Most developers can have it done in a few hours.

POWERFUL SCRIPTING

Includes more than 250 high level actions with everything from registry editing and file copying to web server script interaction and much more.

WORLD-CLASS SUPPORT

At Indigo Rose, we don't outsource our technical support to some far corner of the globe. We'll answer your questions quickly and efficiently and treat you with the respect you deserve.

- Add a powerful and extremely flexible "check for update" feature to your software products.
- The TrueUpdate client executable is compatible with all Windows operating systems from 95 to Vista. Does not rely on .NET or other external dependencies.
- Indigo Rose Software products are trusted by over 20,000 software developers worldwide for reliability and exceptional technical support.

TrueUpdate 3.0 is a comprehensive solution for software developers wanting to integrate automatic updating capabilities into their software applications. TrueUpdate gives you a robust client/server framework for determining required updates, and then retrieving and applying the necessary patch or installation files using standard Internet protocols. You won't find a more flexible solution for adding a reliable "check for update" feature to your product. **We guarantee it or you'll get your money back.**

TrueUpdate 3.0 is easy to integrate into your software and offers almost unlimited flexibility and customization options. The easy to use project wizard assists you with the whole process, helping you identify your file versions, configure patch download locations, build your customized TrueUpdate client and upload the information to your server. By using open and trusted protocols (such as HTTP, HTTPS and FTP) and a standard web server, organizations of any size can deploy TrueUpdate 3.0 enabled software without the need for specialized and costly hardware and software platforms.

TrueUpdate 3.0 is the result of over 15 years of experience creating software deployment tools. You can rely on Indigo Rose to provide reliable tools, top quality documentation and superior technical support .

Every aspect of TrueUpdate 3.0 is customizable, from the appearance and flow of the user interface to the details of the update process itself. It is equally adept at managing firewalls, proxy servers, corporate networks and consumer software installations. You won't find a more powerful or flexible solution than TrueUpdate 3.0. Download the free trial and see for yourself.

TrueUpdate® 3.0

Features and Benefits

Today's rapid product cycles, security vulnerabilities and short turnaround times make it more important than ever to get new versions into the hands of users quickly and efficiently. Ensuring that everyone is using the most recent point release of a particular product makes good sense. It eliminates legacy technical support issues, reduces user frustration and ensures that data is current. It also serves to maintain customer and client satisfaction. Whether you are an independent software vendor, consultant, or corporate developer, you need to add TrueUpdate to your software products.

TrueUpdate is part of Indigo Rose Software's complete line of professional software development tools, which also includes AutoPlay Media Studio, Setup Factory and Visual Patch. Each tool is a leader in its class, providing extraordinary value and reliability. We've been creating tools to manage the complete software deployment life cycle since 1991.

SELF CONTAINED

The TrueUpdate client is compact, optimized, and completely self contained. There are no external dependencies or extras to distribute.

PRIVATE & SECURE

All configuration data is automatically compressed and encrypted. The client pull architecture avoids the legal privacy concerns of competing server push architectures.

FAULT TOLERANT

Built-in support for redundant servers and full control over the underlying server technology allows you to tailor the system to meet your specific requirements.

MULTILINGUAL

Integrated language selection is built into all screen dialogs, making it easy to create multilingual client interfaces and modify translations at will.

BEST VALUE

Royalty-free, per-developer license doesn't scale up in cost no matter how many products or end users you have.

What's New in TrueUpdate?

- The compact and standalone client executable is extremely easy to integrate into your product, taking most developers only a few hours.
- Contains everything needed to handle even the most sophisticated software updating requirements.
- Uses trusted, dependable standards you already rely on (such as HTTP, HTTPS, and FTP), eliminating the need for specialized and costly hardware and software platforms.
- Update systems created with TrueUpdate 3.0 work on all Windows operating systems from Windows 95 to XP and Vista.
- A powerful scripting engine with more than 250 high-level actions gives incredible control over the software updating system.
- The client can easily be integrated into existing software or installed as a standalone application.
- A library of over twenty different screens and a complete graphical skinning system makes it easy to control the user interface.
- Other services lock you into using their servers; with TrueUpdate, you decide where your update files are hosted. There is no need to rely on the uncertain future of an "update service," pay exorbitant annual fees or wait helplessly during downtimes you are powerless to resolve.
