IndigoRose
SOFTWARE DESIGN CORP.

Visual Patch® 3.0 with DeltaMAX™ Compression

World's #1 Fastest Software Patch Maker

FAST & EASY PATCHES

Visual Patch's point and click design takes the difficulty out of building even the most sophisticated patches.

BINARY DIFFERENCING

Competitive tools can stall out on files as small as 40 MB. Visual Patch can make quick work of gigabyte sized files.

FULL-HISTORY PATCHES

Update any previous version of your software to the latest release with one patch file. Dramatically simplifies the patching process for users.

VERSION MANAGEMENT

Quickly and easily add, remove and organize all your product versions using the drag and drop workspace.

WORLD-CLASS SUPPORT

We don't outsource our technical support. We'll answer your questions quickly and efficiently.

- State-of-the-art DeltaMAX™ binary differencing compression creates the smallest possible patch files in less time than ever before.
- Generates a single self-installing patch executable that works with all versions of Windows from 95 through to Vista.
- Indigo Rose Software products are trusted by over 20,000 software developers worldwide for reliability and exceptional technical support.

Visual Patch 3.0 is a fast and efficient solution for developers who need to create secure, compact and reliable patches for their software products. It features state-of-the-art DeltaMAX™ binary difference compression, combined with a powerful full-history patching engine. No other tool makes patch development as easy or as flexible. *We guarantee it or you'll get your money back.*

Unlike other tools that borrow functionality from third-party installers or are built upon command line tools, Visual Patch features a completely integrated visual development environment. Visual Patch automatically takes care of the complicated details of patch development, such as inspecting versions to decide which files have changed, and performing sophisticated byte level differencing on each file in order to extract the differences between versions.

Visual Patch 3.0 is the result of over 15 years of experience creating software deployment tools. You can rely on Indigo Rose to provide reliable tools, top quality documentation and superior technical support .

With its sophisticated yet straightforward user interface, Visual Patch 3.0 simplifies software version management, turning the otherwise complicated task of managing point releases into a fast and automated process. There is no better way to make professional-quality, full-history binary patches for software and other electronic content. Call us today and see.

Visual Patch® 3.0 with DeltaMAX™ Compression

Features and Benefits

Anyone who needs to create compact and secure software patches needs Visual Patch 3.0. This includes software developers, network administrators and IT managers, among others. Regardless of the type of data being distributed - executables, documents, databases, videos, etc. - Visual Patch can figure out what files have changed, find the exact changes within each file and determine how to update any previous version to the current version. Whereas software patching was once a notoriously slow and cumbersome process, companies choosing Visual Patch have a distinct advantage.

Visual Patch is part of Indigo Rose Software's complete line of professional software development tools, which also includes AutoPlay Media Studio, Setup Factory and TrueUpdate. Each tool is a leader in its class, providing extraordinary value and reliability. We've been creating tools to manage the complete software deployment life cycle since 1991.

PROJECT WIZARD

Walks you through the creation of a professional software patch complete with customized dialogs, multiple methods of version detection and rollback.

DATA SECURITY

Unlike a full software installer, patch files contain only the data needed to update older versions - making them ideal for public website distribution.

SCRIPT CONTROL

A powerful scripting engine with more than 250 high-level actions gives unprecedented control over the software patching system. Features everything from registry editing to web script interaction, file downloads and more.

MULTILINGUAL

A unique language selector is included on each screen dialog, making it easy to create multilingual user interfaces and modify translations at will.

BEST VALUE

Compare it to other tools. Visual Patch 3.0 is easier to use, has superior technical support and is priced considerably lower.

What's New in Visual Patch?

- State-of-the-art DeltaMAX™ binary differencing compression creates smaller patches for larger files in less time than competitive tools.
- Make a single patch file that is compatible with all versions of Windows from 95 to Vista with integrated Authenticode signing.
- Intelligent full-history patching algorithms can update multiple older versions to the latest release from a single patch file.
- Sophisticated version management makes it easy to manage all your software releases from one environment.
- Data security and integrity is guaranteed through a combination of 128-bit MD5 hashing, CRC-32 checksums and encryption standards.
- A powerful scripting engine with more than 250 high-level actions gives unprecedented control over the software patching system.
- Supports the creation of both fully-interactive "wizard based" patches or completely automatic "silent" patches.
- A library of over twenty different screens (plus graphical skinning system) makes it easy to control the user interface of your patches.
- Rollback protection automatically restores the original application files if an error occurs or the user aborts the patching process.
